

*Sardinia, thanks to SPTF, becomes one of the most important space technology poles in Europe - commented Giulio Ranzo, CEO of Avio. With the contribution of Asi, this investment on one hand will expand the skills and technological capabilities of the Italian Industry and Universities in space by increasing their competitiveness; on the other hand, it will allow Sardinia to become a strategic crossroads for the future of the sector, also thanks to the qualification tests of the motors of the third stage of the Vega E, which represents the new frontier of European space launchers".*
